Vision-driven Computer Science undergraduate at VIT Chennai specializing in blockchain, web, and mobile application development. Built products like IONIA and TARA, with strong proficiency in Java, Python, React, and React Native. Founder of IONIA, experienced in designing AI agent systems, including context engineering, memory systems, and evaluation harnesses. Passionate about collaborative development, inclusive technology, and building impactful solutions for underrepresented communities.

Skills

- **Languages:** C/C++, Java, JavaScript, TypeScript, Python
- **Web & Mobile:** HTML, CSS, React, React Native, Node.js, Express.js, Next.js, JSX
- **Blockchain:** Solidity, Move
- **Tools & Concepts:** Context Engineering, Memory Systems, Evaluation Harnesses, RAG, Agentic AI, IoT, System Design, DevOps, CAD, CFD (ANSYS)

Education

Vellore Institute of Technology *July 2023 - Present*
B.Tech in Computer Science and Engineering
• CGPA: 8.41/10

Experience

Founder @ IONIA LLP Startup *Remote*

- Founded an AI-powered LMS integrating agentic AI workflows for adaptive assignments, student-teacher interaction, and AI-based grading.

Front-End AI Researcher @ Outlier AI *Freelance*

- Curated and labelled high-quality datasets; corrected model outputs to improve reasoning and reduce bias.

Achievements

- 🏆 Winner at **Avalanche Team1 Web3 Hackathon** — **Best Pitch** and **Best Innovation** *August 2025*
- 🏆 **1st Runner-Up at Trillion Dollar Hackathon 2025** organized by Jazzee Technologies *July 2025*
Recognized for **Best Pitch**, **Best Technical Innovation**, and **Best Creativity** at this prestigious national-level hackathon.
- 🏆 Clinched the **1st Prize at HackHazards 2025** *May 2025*
- 🏆 **1st Place at DevsHouse 2025** *March 2025*

Projects

GeneTrust – Precision Gene-Editing Platform *[Source Code](#)*

Goal: To build an end-to-end AI and blockchain-powered platform for transparent, auditable gene-editing research.

- Engineered an **AI-driven gRNA design pipeline** integrated with IoT sensors for real-time lab condition monitoring.
- Implemented a **blockchain ledger** to record all experiment data, ensuring tamper-proof and transparent audit trails.

IONIA – LMS with Agentic AI Workflows *[Live Site](#)*

Goal: To develop an intelligent LMS powered by agentic AI for personalized, adaptive learning experiences.

- Built **LENS**, an agentic AI sidecar routing teacher interactions across planning, class documents, and insights using **vector RAG**.
- Designed an **AI grading pipeline** that queues and evaluates submissions, serving adaptive, **PYQ-driven** personalised assignments.

TARA – Terrain-Aware Rover Autonomy *[Source Code](#)*

Goal: To engineer an autonomous lunar rover navigation system combining AI and computer vision for safe Moon-surface exploration.

- Developed **real-time obstacle detection** and terrain analysis using **computer vision** algorithms for autonomous navigation.
- Integrated **intelligent energy management** and secure data transmission protocols to ensure mission reliability.

OPAL – Open-Source Private AI for Law *[Source Code](#)*

Goal: To build a GenAI-powered legal co-counsel platform for lawyers with agentic reasoning and blockchain-backed notarization.

- Architected a **DAO of Agents** framework where specialised AI agents collaborate via a **democratic voting mechanism** to deliver accurate, hallucination-resistant legal analysis.
- Integrated **hybrid legal research**, multi-agent reasoning, and **blockchain notarization** on a custom **Avalanche Subnet** for end-to-end legal workflow automation.

Positions of Responsibility

Propulsion Engineer @ Ignition Model Rocketry *VIT Chennai*

- Designed and built model rockets, applying **CAD** and **CFD** with **ANSYS** to optimise aerodynamic performance.
